JThe Guji region lies approximately 300 to 400 kilometers south of Addis Ababa in the Guji Zone of the Oromia Region. In 2002, Guji itself detached from Yirgacheffe, which had previously been folded in with the Sidamo name. Before Yirgacheffe was its own region, those coffees were blended with coffee from a wide geographical area that encompassed much of central-south Ethiopia under the grade “Sidamo”. Despite its long journey, Guji coffees are widely recognized as distinct from both Yirgacheffe and Sidamo coffee thanks to the unique local varieties and microclimates. The Guji region takes its name from the Oromo people, a tribe that has farmed coffee on the land for generations.

In the Ethiopian grading system, grade 2 refers to the cup quality as well as physical quality of a coffee. A grade 2 allows between four and 13 full defects per 300gr green sample. The cup typically has fruity and clean characteristics without any off-flavors.
Ethiopia Sidamo 2 is a classic in every coffee range and is especially popular in blends. The cup quality can be very surprising for prices well below the grade 1 price point. For us, grade 2 coffee typically sits around an 83-84 cup score.
